Production AI Platforms | Agentic Systems | Distributed Cloud Architecture

Engineering executive, technical co-founder, and hands-on architect with 25+ years of experience building and scaling distributed platforms, AI-native systems, enterprise data infrastructure, and global engineering organizations.

Personally owned the technical vision and delivery of production AI platforms spanning conversational agents, agentic workflows, model routing, evaluation signals, secure multi-tenant authorization, backend services, and high-availability cloud infrastructure. Built an entire relationship-based access control service using Claude Code and Cursor while remaining directly involved in implementation, daily pull-request reviews, architecture reviews, and RFC reviews.

Scaled PraxisPro's engineering organization from 3 to 11 across web, iOS, backend, and AI pods while leading the company through a $400K pre-seed round, a $1.5M bridge round, and a $6M seed round. Led a 500+ engineer organization at Apple through a leadership hierarchy of more than 10 directors and two Senior Staff engineers/architects.

CORE LEADERSHIP AREAS

- Production AI and Agentic Platform Engineering
- LLM Orchestration, Model Routing, and Evaluation
- Distributed Systems and API Architecture
- Cloud Infrastructure, Reliability, and Observability
- Hands-On Technical Leadership and Code Review
- RFC, Architecture, and Engineering Design Governance
- Engineering Organization Design and Scaling
- Senior Technical Talent and Staff Engineer Leadership
- Enterprise Data Platforms and Governance
- Platform Security and Multi-Tenant Authorization
- Engineering Operating Models and Delivery Transformation
- Product, Executive, Customer, and Go-to-Market Partnership
- Resource Allocation and Technology Investment
- SRE, DevOps, and Continuous Delivery
- Privacy, Security, and Relationship-Based Access Control

PROFESSIONAL EXPERIENCE

PRAXISPRO - Pleasanton, CA

Technical Co-Founder | August 2024 – Present

- Led the company through its first $400K pre-seed round in February 2025, a $1.5M bridge round in July 2025, and a $6M seed round in January 2026, aligning product, technical strategy, delivery priorities, and enterprise traction with each stage of company growth
- Took an AI-powered enterprise training platform from concept to production, owning technical vision, platform architecture, backend services, AI workflows, security, infrastructure, reliability, and enterprise delivery
- Architected a production platform for interactive AI role-play agents used in enterprise training simulations, including conversational sessions, scenario state, user responses, evaluation signals, and adaptive training pathways
- Engineered a Cost, Latency, and Quality framework to route workloads across frontier models and smaller open-source models according to task requirements
- Reduced platform costs by more than 60% by using smaller models for classification and processing while reserving larger models for generative workloads
- Delivered production agentic AI workflows that saved approximately 7,200 workforce days annually for a 900-person enterprise
- Built an entire relationship-based access control service from scratch using the Google Zanzibar model, including authorization architecture, service implementation, APIs, and secure multi-tenant access controls
- Used Claude Code and Cursor daily for production engineering, implementation, debugging, refactoring, architecture exploration, and delivery of platform capabilities
- Remain directly involved in daily pull-request reviews, architecture reviews, and RFC reviews across the engineering organization
- Built secure multi-tenant authorization across users, organizations, roles, training programs, and enterprise data
- Led migration of the backend to a high-availability arm64 environment to improve resilience and reduce infrastructure costs
- Built an engineering organization from 3 to 11 across web, iOS, backend, and AI pods, increasing release cadence from monthly to twice weekly plus on demand
- Helped deliver a 50%+ improvement in call quality and reduced training knowledge-base preparation time from two weeks to one day
- Supported three paying enterprise customers through customer architecture and security discussions, analytics, sales support, pricing, roadmap governance, and AI council reviews

TEKSYSTEMS - Pleasanton, CA

Generative AI and Data Modernization Strategy Leader | June 2024 – March 2025

- Advised C-suite leaders on generative AI, data modernization, LLMOps, MLOps, responsible AI, and enterprise operating-model transformation
- Built pragmatic roadmaps for integrating modern data platforms and AI capabilities into enterprise environments
- Advised organizations on AI adoption, platform strategy, governance, and measurable business outcomes
- Developed AI pipeline strategy for Sony Publishing
- Supported Microsoft-to-Google Cloud migration planning
- Advised healthcare organizations on AI orchestration and enterprise workflow modernization

APPLE - Cupertino, CA

Engineering Leader, Ad Platforms - Data, APIs, DevProd & UX | January 2020 – January 2023

- Scaled Apple Ads revenue from $1B to $5B in 24 months by architecting and launching five privacy-centric platform products for a global user base
- Led a 500+ engineer organization through a leadership hierarchy of more than 10 directors spanning data engineering, sales engineering, full-stack engineering, partner and solutions engineering, SRE, and senior individual contributors
- Led two Senior Staff engineers/architects and partnered with more than 10 engineering directors responsible for people management across the organization
- Partnered with product, finance, SRE, business, and executive leadership to set priorities, align roadmaps, and execute cross-functional programs across multiple product areas
- Led modernization of targeting and delivery infrastructure using Kubernetes, Kafka, Spark/Flink, Snowflake, Airflow/Databricks, Terraform, Go, Java, and Scala
- Conceived and shipped an automated SaaS advertiser onboarding ecosystem that reduced regional go-to-market latency by 55% and baseline engineering overhead by 75%
- Established a 24/7 global Tier 1 production operations organization across five international regions supporting 99.99% availability for critical ingestion infrastructure
- Managed multi-million-dollar vendor and cloud procurement decisions and optimized global resource allocation for a $5B revenue operation
- Managed a $10M$–15M monthly infrastructure budget while increasing platform capacity, reliability, and performance
- Established an experimentation and ML operating model supporting product iteration, monetization, and privacy-centric, zero-trust principles
- Led engineering organization and experience initiatives focused on improving how engineering teams operate and deliver
- Presented strategy and results to VP staff and senior engineering leadership, aligning Product, Finance, SRE, and Business teams on roadmap commitments

UBER - San Francisco, CA

Head of Software Engineering | July 2018 – January 2020

- Accelerated SEC filing readiness from T+15 to T-5 days, providing the CFO office with the visibility required to successfully execute Uber's May 2019 IPO
- Scaled the Finance Engineering team from 13 to 86 in six months to support IPO readiness and finance transformation
- Directed Corporate Data Engineering across more than 20 global data initiatives supporting compliance, HR, infrastructure, productivity, driver onboarding, Uber Eats compliance, and people analytics
- Established foundational data governance, analytics, and compliance frameworks across a platform with more than 40 pipelines and 1,000 tables
- Managed a platform with a 99.9% target uptime
- Optimized global cash-flow reconciliation by building a custom automated accrual engine supporting financial reporting across Uber's mobility businesses
- Partnered with Finance, Accounting, FinOps, and Engineering leadership to establish delivery priorities, controls, and operating mechanisms for IPO readiness

CAPITAL ONE - McLean, VA

Senior Software Engineering Manager | July 2017 – July 2018

- Led teams building high-volume, low-latency, resilient APIs for global money movement and account management
- Modernized legacy payment and account-management platforms through a cloud-native API stack
- Led migration of the money-movement API to AWS
- Implemented integration capabilities for DevOps, CI/CD, reliability, and cost-management optimization

GOLDMAN SACHS - New York, NY

Executive Director, Technology | October 2009 – June 2017

- Led a 100-engineer cross-functional organization through a $20M modernization of the Listed Derivatives platform
- Expanded the firm's market footprint into the Milan, OCC, and São Paulo exchanges
- Designed and deployed a multi-tier automated Surveillance Platform used globally to detect trading anomalies and isolate market-manipulation patterns
- Led engineering, operations, QA, and compliance operations teams, including 25 direct reports
- Delivered a Supervisory TaskPad interface deployed to more than 10,000 employees for automated compliance certifications
- Built strategic regulatory data and obligations platforms that consolidated regulatory updates, risk and control catalogs, rulebooks, and service interfaces
- Reduced the time required to onboard new data sources by approximately 75% through platform and data-model improvements
- Led business continuity, disaster recovery, performance, and scaling initiatives for high-volume financial platforms

- Partnered with business and technology leaders across global teams to deliver regulated, high-availability systems

EARLIER CAREER

BARCLAYS CAPITAL - New York, NY

Technical Lead | 2007 – 2009

BEAR STEARNS - New York, NY

Senior Technical Consultant | 2006 – 2007

i-FLEX SOLUTIONS / ORACLE - Mumbai, India

Technical Team Lead | 2005 – 2007

ACCENTURE - Mumbai, India

Software Engineer | 2003 – 2004

EDUCATION

Master of Science, Computer Applications
Symbiosis International University — Pune, India

PATENTS

- Interactive Healthcare-Related Sales Training System
  AI-driven interactive training, evaluation, feedback, and scoring system
- Adaptive Interactive Healthcare-Related Sales Training System
  Context-aware adaptive AI system supporting personalized training pathways and real-time feedback

SELECTED TECHNOLOGIES

Agentic AI, conversational AI, multimodal systems, LLM orchestration, model routing, evaluation workflows, RAG, LLMOps, MLOps, Claude Code, Cursor, cloud infrastructure, AWS, Google Cloud, Kubernetes, Kafka, Spark, Flink, Snowflake, Airflow, Databricks, Terraform, Go, Java, Scala, Python, ReBAC, Google Zanzibar, DevOps, CI/CD, SRE, data platforms, enterprise architecture, privacy engineering, zero-trust architecture
